Holy Name **Home Care**

Where Healing Continues

You don't really start feeling better until **you're home.**

In fact, studies show that patients who recuperate at home often recover more completely, and in less time. When home care is just what the doctor ordered, Holy Name Medical Center can provide the quality services you or your loved one needs.

In collaboration with your physician, our home care professionals provide a personalized plan of skilled care and dependable support designed to meet your specific needs. Through education and supervision by our licensed and certified staff, we ensure that home care patients receive the highest standard of care and are treated with the respect they deserve.

GETTING A REFERRAL

- Hospital discharge planners can work with your physician to refer you for home care.
- Referrals can also come directly from your personal physician's office.
- If you or your care partner believe you qualify for and can benefit from home care, you may call our office directly, and we will assess your situation. If you qualify, we will arrange for a conversation with your physician.

SERVICES

Holy Name Home Care provides a wide range of services delivered by licensed and credentialed healthcare professionals.

Visiting Nurses

- Provide skilled care and manage all your home care, coordinating changes with your physician and recommending additional resources, when necessary
- Perform skilled assessments for health and safety
- Administer medical treatments and procedures
- Teach you and your caregiver how to effectively manage your medications and health regimen

Medical Social Workers

- Offer counseling to help you and your family cope with illness or disability
- Assist with long-range healthcare planning
- Provide referrals to community resources, when appropriate

Registered Dietitians

- Provide nutritional assessments, diet instruction and interventions, including the use of dietary supplements
- Consult with you and your caregiver to ensure adequate intake of food and fluids, and compliance with special diets

Rehabilitation Therapists

- Physical therapists work with you to increase mobility and muscle strength.
- Speech therapists help to improve your communication skills and swallowing ability.
- Occupational therapists enhance your ability to perform routine activities and essential personal skills.
- In an effort to maximize your independence, therapists may recommend modifications to the design and layout of your home.

Home Health Aides

- Provide personal care, meal preparation and assistance with your activities of daily living
- Are supervised by registered nurses
